

Sennet Senadheera

(848) 244-0513 | sas639@cornell.edu | [linkedin.com/in/sennet](https://www.linkedin.com/in/sennet)

EDUCATION

Cornell University, College of Engineering

Aug 2022 – May 2026

Bachelor of Science, Computer Science; Operations Research Minor; Dyson Business Minor

Ithaca, NY

Relevant Coursework: Data Structures and Algorithms, Network Theory II, Object-Oriented Programming, Algorithm Analysis, Machine Learning, Distributed Systems, Functional Programming, Databases, UNIX Scripting

RELATED EXPERIENCE

Software Engineer Intern

Jun 2025 – Aug 2025

Capital One | *Kubernetes, AWS, PyTorch, KubeCost, New Relic, Dask, Python, Git, Agile*

New York, NY

- Engineered an end-to-end Kubernetes pipeline for a deep learning model using KFPPlumber, an internal orchestration tool; model assesses client risk based on Net Present Value (NPV) and other proprietary financial indicators
- Integrated PyTorch model into pipeline enabling scalable training/inference across distributed environments; monitored pipeline cost using KubeCost and New Relic, reducing execution cost by 25% via Dask parallel compute optimizations

Co-Founder

May 2024 – present

Prysm | *Agile, React, JavaScript/TypeScript, Next.js, PostgreSQL, Git, Figma*

New York, NY

- Co-founded creator economy startup under Life Changing Labs accelerator's Summer 2024 cohort; constructing an online platform to support creators from any sector by enabling more lucrative monetization opportunities
- Designed prototypes for a creator product request board; conducted 100+ hours of feedback interviews and attracted 45 creators with a total following of over 2 million people; hired 2 interns and prepared for initial seed funding round
- Leveraged React to build a full-stack app and implemented a PostgreSQL database, efficiently handling relational data for 300+ product transactions per day; implemented server-side rendering with Next.js to improve page load times and SEO

Software Engineer Intern

Jun 2024 – Aug 2024

MeOH Inc. | *Agile, OpenAI API, AWS EC2, Python, Java, PostgreSQL, Git, Jira, Salesforce*

Brooklyn, NY

- Structured a PostgreSQL database to collect client transactional records containing carbon emission information and implemented RESTful API endpoints to securely manage enterprise records, supporting over 150 API calls per minute
- Developed a generative AI chatbot using Python to assist clients and reduced customer support response times by about 30%

Treasurer and Product Manager

Oct 2022 – present

Cornell University Engineers for a Sustainable World

Ithaca, NY

- Manage finances and corporate sponsorships (including Boeing) as treasurer for a 75+ member sustainability project team
- Led development of a campus food waste tracking web app; expanded Django backend and migrated frontend to React

Operations Research Intern

Aug 2023 – Dec 2023

Outpost Inc.

Ithaca, NY

- Researched parking optimization strategies for a truck and tractor parking solutions company; performed SQL queries on the company's traffic pattern relational databases to determine more optimal city routes for trucks
- Applied Ripley's K-function, O-Ring spatial tests, and other statistical algorithms to build a multi-distance spatial clustering model on key metropolitan hubs for truck traffic, including the NYC and Chicago metro regions
- Compiled reports detailing statistical findings and recommended solutions to the company's CTO

Data Analyst

Feb 2023 – May 2023

Cornell Data Journal | [Link to Project](#)

Ithaca, NY

- Processed comprehensive weather data, employing data cleaning procedures and supervised learning; implemented Logistic Regression, Decision Tree Classifier, Support Vector Machine, and KNN algorithms to predict precipitation levels
- Optimized the Decision Tree Classifier using bootstrap aggregation; tested max tree depth values from 0–20 and identified 8 as optimal, leading to the highest training accuracy (84%) among all models evaluated

OTHER EXPERIENCE

Cornell CS 1112 Teaching Assistant

| *Python, MATLAB, NumPy*

Aug 2023 – May 2024

- Conducted office hours and instructed a 35-student discussion for a course exploring scientific applications of programming

OFishl Fishing Tournament

| *OCaml, OUnit, Bisect_ppx* | [Link to Project](#)

Oct 2023 – Dec 2023

- Developed OFishl, a fishing game built entirely in a functional paradigm; implemented game mechanics including audio, swimming, fish-catching, store transactions, and resource management, enhancing user engagement
- Achieved exceptional code coverage, surpassing 95% with over 550 lines of test code, employing both glass-box and black-box testing strategies using OUnit and Bisect_ppx frameworks

SKILLS

Languages: Java, Python, OCaml, JavaScript/TypeScript, SQL, C, MATLAB, R, HTML/CSS, LATEX

Libraries & Frameworks: Django, React, Node.js, PyTorch, SKLearn, Pandas, NumPy, Matplotlib, Seaborn, JUnit/JUnit4

Other: UNIX, Relational Databases, Linear Programming, Microsoft Office, Agile Development, AWS, Jira, Figma, Salesforce CRM
